Germany

Dear Sir or Madam,

The worldwide acceptance of the necessity to improve our ecological and economic behaviour is further growing and it evolves more attention to the Eco Governance standards.

Eco Governance describes the **ecological** and **economic** way (**governance**) of managing organisations, administrations and companies. It provides an eco-friendly leadership with efficient actions to reach sustainability, health and real prosperity. The origin of many conflicts in societies is rooted in energy and resource addictions, pollution, toxic materials, unrealistic growth theories and inefficient planning.

The general international standard of **Eco Governance** obtains a global trend of ecological and economic governance. Its implementation enables to reach a multilateral ecological and economic behaviour towards more healthy-products, -food, -transports and -energy with the help of sufficient management. Ultimately Eco Governance views global reasonable planning along with eco-friendly solutions and cycle economies bringing stability to the social and financial sector.

Practice of Eco Governance can signify:

- Efficient and simplified organizational and economic conduct
- Production of eco-friendly -materials, -products, -transports and -energy
- Utilization of eco-friendly -materials, -products, -transports and -energy
- Support and utilization of eco-friendly recycling methods
- Reducing pollution, toxic emissions and environmental impact
- Supporting eco recovery and environmental protection projects

Companies, organizations and individuals are invited to follow Eco Governance.

We would be delighted if you express your support.

Suggestions and co-operations are welcome.

Yours sincerely
